🐙 HosnawHb

Professional Summary

Machine Learning Engineer and M.Sc. Computer Science student at Concordia University with experience in deep learning, computer vision, and natural language processing. Proficient in developing and deploying ML solutions using transformers, generative models, and prompt engineering techniques. Successfully built end-to-end pipelines in both academic research and production environments, with a strong focus on model performance and practical deployment.

Education

Concordia University

M.Sc., Computer Science

Sep 2024 – Sep 2026

University of Guilan

B.Sc., Computer Engineering

GPA: 18.40/20 (3.89/4)

Sep 2019 – Aug 2023

Thesis: *Blood Glucose Prediction Using Mixture of Experts*

Honours & Awards

Tuition Waiver, B.Sc., University of Guilan

National Organization for Development of Exceptional Talents (NODET)

Ranked 6th among B.Sc. Computer Engineering students

Skills

Programming Languages: Python, Java, C++, VHDL

ML Frameworks: TensorFlow, PyTorch

NLP & GenAI: BERT, RNN, LSTM, GRU, Transformers, LangChain, Prompt Engineering, LLMs, NLTK, spaCy, Word2Vec, Hazm, Parsivar

Computer Vision: Image Segmentation, Object Detection, U-Net, SegNet, CNN, Attention Models, Data Augmentation

Web Development: HTML, CSS, Bootstrap, JavaScript

Data Visualization: Matplotlib, NumPy, Seaborn

Other Skills: Problem Solving, Teaching, Public Speaking, Presentation, Group Work

Work Experience

FlowChat

Machine Learning Engineer

Tehran, Iran (Remote)

Sep 2022 – Jul 2025

- Designed and developed NLP models for chatbot systems using BERT, RNN, and LSTM in production environments.
- Applied prompt engineering and experimented with LLMs for response generation and topic modeling.
- Led ML pipeline design for model training, evaluation, and deployment.
- Collaborated across teams to integrate AI components into backend infrastructure.

Selected Projects

LLM-based Chat Generation: Private Project

- Used LangChain to implement LLM pipelines for prompt-based text generation and question answering.
- Experimented with summarization and multi-turn dialogue flows using pre-trained language models.

Amazon Sentiment Analysis: GitHub Repository

- Performed sentiment classification using Naive Bayes and fine-tuned BERT for improved text understanding.
- Captured rich representations of text using embedding layers.

Multi-label Text Classification: GitHub Repository

- Developed text classification models using GRU, LSTM, and RNN.
- Focused on multi-label neural architectures and advanced preprocessing.

Weather Prediction Image Classification: GitHub Repository

- Trained image classifiers using ResNet and Inception on weather datasets.
- Applied data augmentation and visualized results using Seaborn.

CamVid Image Segmentation: GitHub Repository

- Applied the SegNet model to segment driving video frames.
- Employed tools such as NumPy and Scikit-learn for preprocessing and analysis.

Certificates

IELTS (Overall: 7.5) – Speaking: 7, Listening: 8, Reading: 8, Writing: 6.5 – Jun 2023

Deep Learning Specialization – Coursera, Stanford – Aug 2023

Natural Language Processing with Probabilistic Models – Coursera, Stanford – Sep 2022

Introduction to Data Science in Python – Coursera, University of Michigan – Jul 2022

Machine Learning – Coursera, Stanford – Aug 2021

Languages

Persian: Native

English: Fluent (IELTS 7.5)
